1 Rising Slope Requirement
Requires ADX > 22 and positive slope; completely eliminates sideways churn.

2 Directional Confirmation
+DI/-DI crossover confirms exact entry timing.

3 Fast Breakeven Trailing
Moves stop loss to breakeven upon 1.0x ATR move in profit.

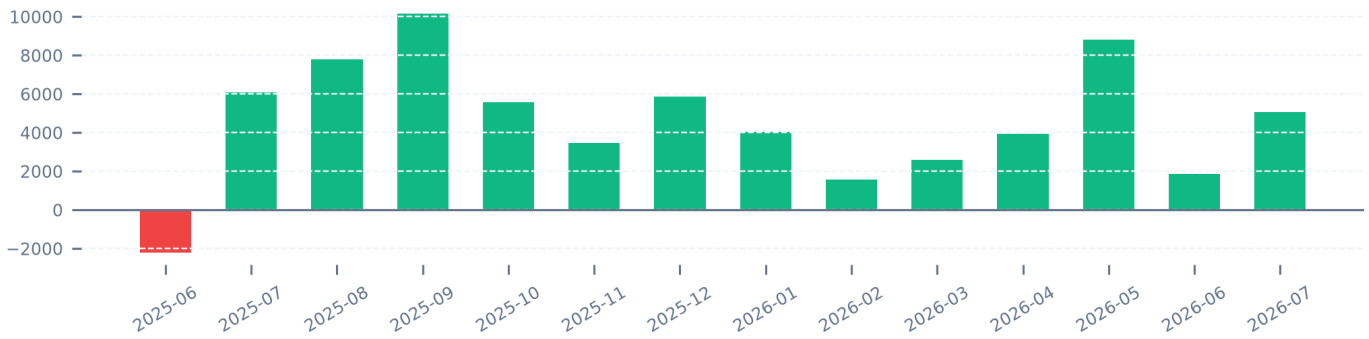

WHAT THIS STRATEGY DOES

Evaluates the ADX slope (rate of change) combined with directional movement (+DI/-DI) to execute entries only when true trend momentum is accelerating, eliminating choppy consolidations.
